everything is possible

TOTAL AUTOMATION
smartlife

Look at you world more serene

Jepssen was one of the first industries to propose solutions for total automation and to improve the quality of life, inserting them into a broader and revolutionary concept, that of modular unitary technology, made of modular bricks that are unlimited in number, the only one that it can really guarantee a complete answer to every need.

Smart Robot Cam HD: more than one camera

Constantly monitoring the home or the company from a distance is increasingly a necessity that can not be renounced. With the WiFi Smart Robot Cam HD camera, it is within everyone's reach. It is fully automated and robotized for all video-control and video-communication functions, it works wirelessly, 802.11n WiFi standard, makes full HD 1080p high-definition color panoramic video, has infrared sensor with automatic light switching / dark, for night shots or in non-illuminated rooms up to 15 meters.

Total remote management

Through the same App (Android, iOS) of all the other SmartLife modules, it is possible from a remote device (eg smartphone) to manage the camera movements vertically (up or down) with an inclination up to 120°, in horizontal (left / right) with a rotation up to 355° and with the Zoom enlarge the image up to 4x, so as to frame the area of interest. It is possible to create any scenario or event by programming it from the "Smart Life App Manager", using only one or more Smart Robot Cam HD, combining it, if necessary, with all the modules and accessories of the SmartLife range. The applications become truly unlimited and range from home or company surveillance in case of intruder access to the premises to the constant monitoring of their loved ones.

More tranquility

The most expensive things are those that you want to protect more. Being able to see that a baby is resting in the cradle, a child is playing in his bedroom, gives tranquility. Being able to constantly monitor an elderly person, a sick person or a disabled person, knowing that if he needs to be able to intervene to help him or to help him, he offers an absolute guarantee. Even for the affection you have for your cat, dog or any other pet there is the desire to be able to stay calm seeing that everything is fine. This can be done with the Smart Robot Cam HD camera also in a programmed way, setting the functions of automatic activation of audiovisual shots with sending messages for viewing in real time on the default remote device, framing the subject in the ideal view. It will be possible to communicate with them thanks to the microphone and speaker integrated into the camera.

More automation

Just the total compatibility of the Smart Robot Cam HD with all the other modules of the SmartLife range is another important step in the ever-increasing need for true home or business automation. The solutions that can be created are endless and range, for example, from wanting to turn on the lights when you enter a room to the activation of any other electrical or electronic device (TV, fan, opening curtains, etc.). The motion sensor of the camera detects access and activates/deactivates the programmed devices.

More security

Through the built-in motion and sound sensors (voices, noises, etc.), it is possible to monitor and display on a remote device (PAN, Droid TV, Mediabox, smartphone, tablet, computer, etc.) access to the various controlled environments of the home or company by intruders or thieves. In fact, the Smart Robot Cam HD, in the case of any detection sends an email and a message in the App, so as to allow immediate viewing on the remote device paired. By creating the preferred scenarios you can set the automatic activation of the video recording on a Cloud Storage (ex: Amazon Cloud) or on an SD Card inserted in the appropriate camera reader and, in combination with all the modules and accessories of the SmartLife range, activate for example, an alarm siren, turn on the lights entering the room or any other electrical or electronic device.

All wireless

The Smart Robot Cam HD is made in WiFi standard and communicate with each other wirelessly. Through the WiFi router can be managed via the internet and from 3G/4G LTE mobile devices (Tablet PC, smartphone, etc.) from anywhere in the world. A further advantage of WiFi technology is that it is not necessary to make any changes to the pre-existing electrical system, making installation as simple as possible and reducing costs to a minimum.

All with a single direction

Each Jepssen product is ready to manage the functions of the SmartLife modules. Just install the Apps in the DigitalBox 4K, in the MediaBox 4K, in the Tablet PC PAN or in the OnlyOne PC. In this way it is possible to control from various "stations", even remotely, all the devices, modules and various connected electronic equipment.

OS Android and iOS Apps

It is also possible to install the Apps in the various devices with Android or iOS operating system. All Jepssen products, in this way, interact with these devices (smartphones, tablets, etc.).

All with a click or voice

The Apps of the SmartLife modules allow an easy management of all the automation functions, just click on the various icons or menus. Obviously the most natural way is to be able to command everything with the voice and even ask to be helped by a personal assistant. This is possible thanks to the complete compatibility with Alexa (Amazon Echo) and Assistant (Google Home). These products recognize the voices of multiple users (the components of a family unit or the staff of a company) and with the use of artificial intelligence are able to interact, dialogue and execute commands.

Beautiful and easy to install

Aesthetically very elegant and futuristic (becomes a real piece of furniture) has very small size for easy installation or placement on any furniture or shelf. Supplied with USB cable and power supply and wall or ceiling mounting kit.

A simpler and more peaceful life

With SmartLife modules you can really get a better quality of life because everything becomes easier, safer, more manageable, without having to have a high budget because all these Jepssen modules have a very low cost and can be integrated, from time to time in time, with the growing needs.

SMART ROBOT CAM HD - SC1

- Motorized IP Camera Wireless Infrared Full HD 1080p 25fps
- OS Android & iOS Apps
- WiFi 802.11n (up to 1.3Gbps)
- Remote Control via Internet and 3G/4G LTE mobile network
- Remote Control PAN / TILT
- Panoramic motorized shots 355° (horizontal) and with inclination up to 120° (vertical)
- Digital Zoom 4x
- Automatic switching of day/night video recording
- Infrared night vision up to 15 meters
- Motion and sound detection with automatic video recording on SD Card or Cloud Server
- 2-way audio with microphone and speaker
- Smart Life App Manager
- Amazon Echo Spot Alexa & Google Home Assistant (opz.) compatible
- Slot microSD Card
- Mini-USB 2.0 port
- Mini USB Cable
- LED indicator (operating status)
- supports operating systems Microsoft Windows 11 / 10 / 8.1 / 7 / Vista / XP / Linux / Mac / Android
- Supply 5V DC 1A
- External Power Supply DC5V 1A
- dimensions 8.5 x 6.0 x 6.0 cm
- weight 280g
- White or Black color
